METHODS AND APPARATUS FOR CONTENT DELIVERY VIA APPLICATION LEVEL MULTICAST WITH MINIMUM COMMUNICATION DELAY

ABSTRACT

A method for constructing an overlay multicast tree to deliver data from a source to an identified group of nodes is provided in which a plurality of nodes are identified and mapped into multidimensional Euclidean space. A geometric region is constructing having a size that is the minimum size necessary to contain the source and all the nodes.

Once constructed, a tree is created beginning at the source and including all of the nodes within the geometric region.
